Invented for life

# DataLite AI

AI-powered master data management on  
SAP BTP for clean, trusted enterprise data

# The truth was always in your data. DataLite AI makes it easier to see.

Unreliable data doesn't just slow teams down. It erodes trust in every insight, every report, and in every call made at the boardroom table. DataLite AI is built to fix that. A lightweight, cloud-native solution running on SAP BTP, DataLite AI brings AI-powered intelligence to master data management, so your enterprise operates from a single, clean, trusted source.

## Run your enterprise your way with control, approvals, and integration in place

### **Built-in governance across your systems**

Role-based access, compliance controls, and audit-ready governance across your entire SAP landscape.

### **Streamlined processing with less effort**

Workflow approvals, business rules, and bulk data processing, all with minimal configuration.

### **Seamless connectivity across platforms**

SAP and non-SAP environments, hybrid setups, and complex IT landscapes without disruption.

# Core capabilities that power DataLite AI

Purpose-built for enterprises that should no longer operate on unreliable data.

## **AI-driven deduplication**

Machine learning detects and merges duplicate records, keeping master data clean and consistent without manual intervention.

## **Bulk data processing**

Upload or update 500+ material records in minutes, not days.

## **No-code configuration**

Enable business teams to configure validation rules and workflows independently without IT dependency.

## **SAP Fiori UI**

Improve adoption with a familiar SAP Fiori interface designed for speed and usability.

## **Enterprise-grade security**

Ensure compliance with granular, role-based access controls at every layer.

## **Rapid deployment**

Faster GTMs, with minimal disruption to your existing landscape.

## **Scalable and cost-efficient**

Accelerate deployment and reduce TCO with a lightweight, cloud-native solution.

## **Universal integration**

Connect seamlessly across SAP and non-SAP systems to maintain unified data flows.

# From data debt to data dividend

## Before DataLite AI

**Legacy data scattered across systems ahead of an S/4HANA migration, with no single source of truth.**

**Business teams blocked by IT dependency for every data rule or workflow change.**

**Duplicate and inconsistent records undermining reporting and decision-making.**

## With DataLite AI

Clean, validated, analytics-ready master data enabling faster go-live with reduced data risk.

Self-serve configuration that puts governance in business users' hands, reducing IT backlog and accelerating turnaround.

AI-driven deduplication that restores confidence in data, enabling more reliable reporting and better decisions.

## Why Bosch DataLite AI

Speed without compromise. DataLite AI deploys quickly, scales effortlessly, and reduces total cost of ownership while improving the quality of every data asset your enterprise depends on. It doesn't ask your landscape to change around it. It fits in, connects up, and gets to work.
